ARTS AND LAW DEFEATED BY MEDICINE MEN

Exciting Game Staged at Start of Series.

FINAL SCORE WAS 7-6.

Arts and Law Team Weakened by Absence of Hughes and Gallery.

In the opening game of the inter-faculty football series, the Medicine team defeated the Arts and Law team in a hard and fast game. Neither side had a full team on the field. The Meds. were minus the services of Al. Greenwood and Fawcett, while the Arts team lacked "Bill" Hughes and John Gallery.

In the toss for goals Meds. won, and elected to play the west goal, which gave them the wind. In this quarter the ball zigzagged up and down the field near centre, and neither goal-line was ever in danger. The quarter ended with Arts in possession of the ball in Meds. territory. Score—0-0.

In the second quarter the Meds. slowly drove the ball down the field, and managed to push it over for a touch. This convert was from a hard angle, and did not succeed. The score was now 5-0 for Medicine. There was no more scoring during the rest of the quarter. At half time the score stood: Meds., 5; Arts and Law, 0.

In the third quarter Arts rallied and proceeded to batter their way down the field for a touch. Davis failed to convert. Score, 5-5. After the kick-off, Arts kept up their good work, and managed to force a rouge. The score now was 6 to 5 for Arts. There was no more scoring in this period.

In the last quarter the play was mostly in Arts territory. After five minutes of play Medicine forced a safety rouge, and soon after forced another. The score was 8 to 6, with Med. in the lead. After the last rouge Arts rallied, and proceeded to force Medicine back to their own goal line. Time was called with Arts in possession of the ball on Meds.' 5-yard line. Final score: Medicine, 8; Arts and Law, 6.

For Medicine Harry Pitts and Gilhooley played the best game. Pitts gained yards every time he got the ball.

For Arts and Law, "Gaw" Dooner, at middle wing, showed some good work. McGillis' playing at quarter, and the tackling of Davis were also outstanding features.

THE FIRST SING AT THE HALL.

Once more the cosy Reading Room in the Hall will be ringing next Sunday night, with the sound of popular hymns. The sings have been one of the most popular and helpful things the "Y" has been offering to the students since its appearance on the College Campus.

Many a student whose home is out of town has nowhere to go after church on Sunday night. The "Y" has therefore met this need, and has organized an informal song service, commencing at 9 p.m., and ending at 10 p.m., every Sunday night.

Quite a few innovations were introduced last year, one being that nearly every second sing was "mixed," the fellows being welcomed in the Hall with their young lady friends. The R.V.C. students have helped considerably to make the mixed "sings" a success, and we understand that they will figure prominently again this year.

The first "sing" will take place next Sunday night. Popular hymns will be sung around the fire place of the Reading Room, and "Mel" Wright, of the National Y.M.C.A. Council, will say a few words to those present, after which refreshments will be served, including "Cap's" famous coffee.

It is to be hoped that many students will avail themselves of the opportunity offered by the "Y" next Sunday.

NEW PRINCIPAL FOR QUEEN'S.

KINGSTON, Ont. —At a meeting of Queen's University trustees, the appointment of Rev. Dr. R. Bruce Taylor, Montreal, as principal, duties to commence on the first of December, was ratified.

Dr. E. Flammer, Harvard, was appointed assistant professor of physics, and O. S. F. Smith, assistant professor of physics in Pennsylvania State College, was appointed lecturer in physics.

Notice was received from the Ontario Department of Education that the agreement with regard to the faculty of education at Queen's was to be terminated in July, 1918.

WILL ACT AS JUDGE.

Sir Wm. Peterson, K.C.M.G.

CHEMICAL SOCIETY HELD A MEETING

First Meeting Was Occasion for Presentation of Paper by Dr. Skirrow.

The first meeting of the Chemical Society this season was held in the Chemistry and Mining Building at 5 o'clock on October 12th. After the reading of the minutes of the previous meeting, the retiring president, Dr. F. W. Skirrow, called for nominations for president and secretary for the ensuing year.

Mr. O. Mass was unanimously elected president, and Mr. E. G. Young, secretary.

There followed upon this a very fitting tribute from Dr. R. F. Rutlay, to two world renowned chemists whose deaths occurred during the last summer, Adolf von Baeyer, and E. Buchner. The death of the late Dr. Girdwood and his illustrious career were referred to, and the society expressed its deep regret by a resolution of sympathy to the family of the deceased.

The paper of the evening, entitled "The Bucher Process for the Fixation of Atmospheric Nitrogen" was then presented by Dr. Skirrow in a most interesting and lucid manner. Briefly stated, the process is the production of sodium cyanide from sodium carbonate by the action of carbon and nitrogen, using iron as a catalyst. The three solid substances are mixed thoroughly together, and prepared in the form of small lumps, called "briquettes." These are placed in a perpendicular iron pipe and either nitrogen or producer gas passed through it. The pipe is maintained at a temperature of 800 to 1,000 deg. C. The sodium cyanide passes out of the top when it is collected.

The process is being worked by the Nitrogen Products Co., commercially, and if successful the world need have no fear for the nitrogenous fertilizer to produce its food stuffs.

WHAT'S ON.

TO-DAY.
12.30 p.m.—Special Med. Exam. for students taking part in Sports.
2.00 p.m.—University Sports at Stadium.

COMING.
Oct. 20.—R.V.C. vs. Macdonald at Tennis.
Oct. 22.—Arts' Election for President and Secretary of Undergraduate Society.
Oct. 25.—Election of Hockey representative.

ANOTHER MEANS OF WINNING THE WAR.

Of ways to win a war, federal regulation of men's fashions may seem the oddest, but we shall presently make the acquaintance of other devices now quite as unexpected. There is not in Europe a warring nation, perhaps not a neutral one, that has not to some extent regulated costume to save material. Public opinion has everywhere been rallied for economy. Multiplied by millions, saving of any kind is no trifle. The cloth used in turn-up cuffs at trouser-bottoms, one pair for each American male, would make a strip 18 inches wide from here to the Pacific Ocean; and some men have many pairs. Norfolk pleats waste relatively even more cloth. Most of all has gone in needless duplication of special-purpose garments.

WELCOME FOR FRESHMEN AT PRES. COLLEGE

Fred. Fowler, B.A., Addressed First Year Men.

PRIN. RITCHIE GUEST.

Advice to Students is to Steer Towards Matrimony.

Last night a banquet was tendered to the freshmen of the Presbyterian College. After the good things had disappeared, leaving everyone with a feeling of contentment and good fellowship.

Fred Fowler, B.A., President of the Students' Association, gave the toast of the King, which was honored in the usual way.

W. T. Taylor, B.A., then proposed the toast of the Faculty, and remarked "that the professors after all, were men, like-minded with ourselves." His experience was that they would help a man morally, spiritually and financially. He would venture to suggest that they might help the students to steer towards the sea of matrimony.

Prof. Gordon, replying for the faculty, remarked that some ten years ago, Prof. Welsh and he were Freshmen professors.

Mr. A. M. Pope, B.A., proposed the toast of "Our Heroes," giving a splendid tribute to those who had paid the supreme sacrifice, of whom five were students in their college, viz., Murray Sutherland, Homer Matheson, B.A., D. McKellar, and William Kier.

J. Copeland, a returned soldier, and who went overseas from the Presbyterian College, replied.

In feeling and well chosen words he spoke of the difficulties, and also the gleams of sunshine in the trenches. He told the students that a letter acted as a cheerful reminder of friends in the home land.

W. Swann, vice-president, gave the toast to "Freshmen in Theology," which was responded to by T. De Witt Scott, B.A.

Mr. Scott remarked that he was by nature Canadian, by descent English, Irish, Scotch and Dutch and Holland being almost submerged, he himself felt quite at home with the Swans. "Arts Freshmen" toast was then given by J. Grien, and good advice—which, of course, is never needed by freshmen, or if needed, never heeded—was given.

Norman Labelle responded in a few well chosen words.

Principal Ritchie, who had been invited to the dinner, was then called on for a speech, and gave good advice, especially those who might consider sailing the matrimonial sea before they had finished their college course.

ARTS UNDERGRAD. ELECTIONS.

The following nominations have been received by the executive of the Arts Undergraduate Society:

For President—W. W. Blamplin and P. Presner.

For Secretary—Wm. Hodgson and L. J. Cohen.

The elections will take place on Monday next, from 10 a.m. to 1.15 p.m., in the Reading Room of the Arts Building. All men undergraduates of the Faculty of Arts have a vote, as well as any partial students who have paid the membership fee. The nominations have been posted in the Arts Building.

THREE GAMES FOR YALE FRESHMEN.

NEW HAVEN, Conn. —The Yale freshman football team will meet the Phillips Exeter Academy team in the Yale Bowl to-morrow. This will be the first athletic contest since the declaration of war in which Yale has taken part. Yale will meet Harvard on November 17 at Cambridge, and will play the Princeton freshmen here on November 24.

Yale has been asked to have the freshman team play several of the military teams at Plattsburg and Ayer. None of these invitations has been accepted, as the freshmen are getting only three hours' practice a week.

T. A. D. Jones, Yale's varsity coach, and Dr. A. C. Bridges, are devoting practically all their time this fall to the freshmen, as Yale has no varsity team.

LOST.
On new Stadium, Fountain pen. Finder please return to J. P. Gilhooly, Med. '20. care of Janitor, New Medical Building.

RAIN DAMPED ARDOR OF MILITANT FRESHIES.

Last night, after the C.O.T.C. drill had been dismissed, the Freshmen mustered with commendable patience to resume their search for the elusive Soph. In spite of their grim determination, however, the would-be executioners felt their courage waver before the heavy downpour of rain that set in. After a brief march past the Hall, on Sherbrooke Street, the gathering seemed to split up, as bands were seen returning by the vigilant Daily reporters. The Sophomores, warned in advance, were absent from the drill, and rumours were circulated that captures of Freshmen were made before it.

MORE REVELATIONS OF FRESHMEN'S ILL-LUCK

Chose as Their Steed the Identical Car Used by Sophomores.

From recent accounts that have come to light of the Freshman-Sophomore clash on Wednesday evening, it is plain that the operations were even more interesting than was at first supposed. It appears that the enterprising Freshmen, waxing wrath at the treatment meted out by the two motors filled with sophomores (for there were two) decided to obtain a car in which to pursue their foes and exact vengeance. By an amusing coincidence they went to the same garage as their enemies had, and obtained the car which the latter had just returned. As the chauffeur in charge was the same as had been previously employed by the second year men, the search for the Sophs. was, needless to say, lacking in success.

This same car was later observed in its garage in an exceedingly dilapidated condition, and bearing decorations of decayed fruit and eggs. The tragedy which had been enacted was not hard to guess. Plainly some of the excited first year men had not recognized their mighty men of valor when they approached on the vehicle, and taking them for Sophomores, had attempted to make up for their previous failures by displaying some unerring marksmanship with their native weapons.

IF RALPH ROSE HAD BEEN A GRENADE THROWER.

(By Paoli, Champion Grenade Thrower.)

Before the war, there was never a sport, a match of strength or of speed, in which we did not see among the competitors, now conqueror, now a dangerous rival of champions, this powerful athlete with the face of a Roman centurian.

Paoli, with exceptional physical gifts, could, by specializing, have taken his place among the most formidable champions of a sport. He did not wish to do so. Considering, doubtless, that athletics merely constituted a school for perfecting all the muscles, in which the human being should prepare with all his strength for life itself, he devoted himself to the more violent forms of sporting activity: powerful footballer, runner of 100 meters with progressive starting, long jumper, champion of weight and disc throwing, he also triumphed in the Roman wrestling matches and in boxing championships.

Amongst all others, the military championships have retained an unforgettable impression of the year when Paoli and Paoli, competitors in the majority of the contests, between them carried off nearly all the trophies from the elite of youth of our army.

For the last three years Paoli had had to specialize, in spite of himself. But the specialty, this time, it consists, in trench warfare, of utilizing against the enemy his formidable disc-throwing talent, and of teaching the young athletes of the war the power and the precision of the gestures which bring death in their wake. It was the role of the Vie au Grand Air, the well known Paris publication, to ask the war champion grenade thrower for details and souvenirs. He gives us them below, in the modest way which he likes, by placing before us the American champion, Ralph Rose, who would now have been under the Star Spangled Banner, if death, a little before the war, had not prematurely taken him.

"Although each sport, by the training of the muscle, by the self-control, the will-power, which it necessitates, has placed the athlete who practised it in the forefront of the combatants, there are only, to my recollection, two specialties which have been completely utilized in the war: shooting and throwing the weight.

I personally had the advantage of being especially trained for the last sport, and have been able to see for myself its efficacy in trench warfare. It is true, of course, that in going out to the assault the grenade thrower cannot estimate with exactitude the share his task has in the common offensive. There are too many factors of death around him—machine guns, barbed wire, artillery action, which second his work. But in the life without moment, at the loopholes, on the other hand, there are moments when the grenade thrower feels he is fighting alone, and when he feels the pride of having the monopoly all to himself of death dealing gestures.

One day, in particular, I myself had this complete satisfaction. The sector was calm, and I was resting in a dugout. The enemy trenches, about fifty metres off, seemed to be asleep, like our own, under the vigilant and silent protection of the watchers at the loopholes. Suddenly there is a rifle shot from one of the camps—who knows which?—a reply, and soon the grenade throwers are aroused. The Huns had a "champion." Whilst our soldiers' shots fell short each time, he succeeded regularly in landing his murderous projectiles in our lines. It must be remarked that the average of the grenadiers on both sides rarely exceeds throwers to 30 metres. The powerlessness of the reply became irritating, and the unequal duel, if prolonged, must have cost us dearly. They came to fetch me.

In my shirt-sleeves, with an assistant behind me to pass me the projectiles one by one, I took my place at the grenade throwers' opening. It was an orgy of sport, with frenzied enthusiasm. The grenade is so light! I threw more than a hundred. At first there came from the other side shouts, imprecations, an attempt at a reply. But I have always cultivated the precision of my throws, and, amidst the clamor and acclamations of my comrades I reduced our adversaries to silence, and forced them to take shelter in their dugouts. To speak the truth, it was my finest championship, the ones which I remember with the most pleasure.

I have fought many others, in the lines. There are so many annoying people to rid oneself of, so many "clearings-out" to be effected, so many enflaming loopholes which seem to solicit the efficient play of your muscles. Besides, you have to train, and it is only by constant practice that one can succeed in throwing one's half dozen grenades to sixty metres, within a radius of one metre.

In this result, which constitutes my usual performance, I feel a certain pride tinged with regret. How I wish, since we are fighting a match in teams—and what a match, and what teams!—that all my co-teams could also, in throwing, exceed sixty metres. There would then be between the Huns and ourselves in the same difference of play which exists in Rugby football between a French team and the New Zealanders.

Our team captain would be a formidable giant, Ralph Rose. I have often thought of him in our trenches, when people were going into ecstasies over my prowess and my strength. I saw him again at Stockholm, where he competed for the last time, two years before the war, in the Olympic Games. In the midst of the world's best athletes—and for tests of strength, a pleiad of giants was gathered together, McDonalds, Sheridans, and yet others—he appeared the most powerful. He was nearly

U. OF M. STUDENTS ADVISED.

ORONO, Me. - In his Chapel address at the opening exercises of the University of Maine, President Robert J. Aleo mentioned that he had formulated a statement of the ways in which he, as a non-combatant, proposes to serve the United States and her allies during the war, and expressed the hope that each of the students might endorse it. This is the statement:

1-I will keep myself as well posted on the causes and progress of the world war that I may be a source of information and influence to others.
2-I appreciate so thoroughly the danger of internal enemies that I will report to the proper authorities the name and location of every native or alien citizen whose conduct or utterances indicate enmity to our country, or lack of sympathy with our aims.
3-I will do all in my power to encourage increased production of food materials, both animal and vegetable.
4-I will cheerfully change my habits of eating, so as to help conserve wheat, animal fats, dairy products and sugar.

5-I will assist in every possible way to make the second and all succeeding Liberty loans a success.

6-I will practice economy and deny myself luxuries, so that I may contribute large sums to the various necessary war philanthropies.

7-I will help to stabilize public opinion by showing the reasonableness and necessity of the Government's demands, and the baselessness of the unfounded rumors relating to the war.

8-I will be a friend and comforter to the families of soldiers and minister to their needs in every possible way.

9-I will try to meet all the varied events of the war with patience, calmness and optimism.

10-I will work harder and more earnestly, so that I may contribute my part to make up the loss due to the withdrawals from industry of large numbers of men for the army.

President Aleo emphasized the need of educated men. In no previous world crisis, he said, has it been as great as now. In every human operation there are needed the highest skill and training that can be procured. It is a time, he added, when men and women everywhere show unusual earnestness.

"From the battlefields of Europe and from the great army encampments, where men are being prepared for these battlefields," said President Aleo, "there comes the word that the individual soldier is getting close to God in his feelings and desires. In these trying and strenuous times it is essential for each of us to have an anchorage in things eternal. We need to pause occasionally in our duties and bring the infinite within us in touch with the infinite without us."

IF RALPH ROSE HAD BEEN A GRENADE THROWER.
(Continued from Page 3.)

10 centimeters taller than anyone else, and yet in an assembly, by 185 can hold its own. His appearance was imposing. The way he let go, although we were in the habit of seeing the spectacle of his strength, astounded us each time. Slow at the beginning of his throw, he was extremely quick at the end, and his prodigious vigor was allied to a scientific mastery of the sequence of efforts of suppleness, which has never been equalled. It was perfection itself in the co-ordination of movements, in which all the muscles were in play, and in which the role of each of them was so regulated as to yield, in speed or intensity, everything which could increase the power with which the leaden ball was sent.

What exploits Ralph Rose would have accomplished to-day, in the trenches, with the grenade, which to me, seems so light, in his hands? Surely, if he had lived, if a devastating sickness had not struck him at San Francisco, in the prime of his force, the year before the war, we should have seen him in the foremost ranks of the American combatants, ranged under the Star Spangled Banner. The banner of the Stars and Stripes, which he had so often led to victory in the games of the stadium to which the whole universe sent its champions, he would have wanted to lead to victory in this war in which America has ranged herself on our side.

20c each, 3 for 50c

Beneath his helmet, with all his equipment, formidable, dominating all, what would Ralph Rose have done in the trenches, if he had been a grenade thrower? My very best and most successful throws barely exceed sixty-five metres. He would have beaten me, I am positive, by at least fifteen metres. Imagine the Hun trench eighty metres away, calm in the absolute certainty of being out of range of any projectile thrown by the men, and then think of him there! And do not say that throwing the grenade is just as much like throwing the javelin as it is like throwing the weight, and that the last movement is that of throwing the disc. Ralph Rose used to throw the disc. He had the strength, the knowledge,

PROVINCE OF QUEBEC

DEPARTMENT OF COLONIZATION, MINES AND FISHERIES.
The chief minerals of the Province of Quebec are Asbestos, Chromite, Copper, Iron, Gold, Molybdenite, Phosphate, Mica, Graphite, Ornamental and Building Stone, Clays, Etc.

The Mining Law gives absolute security of Title and is very favourable to the Prospector.

MINERS' CERTIFICATES.

First of all, obtain a miner's certificate, from the Department in Quebec, or from the nearest agent. The price of this certificate is \$10.00, and it is valid until the first of January following. This certificate gives the right to prospect on public lands and on private lands, on which the mineral rights belong to the Crown.

The holder of this certificate may stake mining claims to the extent of 200 acres.

WORKING CONDITIONS.

During the first six months following the staking of the claim, work on it must be performed to the extent of at least twenty-five days of eight hours.

SIX MONTHS AFTER STAKING.

At the expiration of six months from the date of the staking, the prospector, to retain his rights, must take out a mining license.

MINING LICENSE.

The mining license may cover 40 to 200 acres in unsurveyed territory. The price of this license is Fifty Cents an acre per year, and a fee of \$10.00 on issue. It is valid for one year, and is renewable on the same terms, on producing an affidavit that during the year work has been performed to the extent of at least twenty-five days' labor on each forty acres.

MINING CONCESSION.

Notwithstanding the above, a mining concession may be acquired at any time at the rate of \$5.00 an acre for SUPERIOR METALS, and \$3.00 an acre for INFERIOR MINERALS.

The attention of prospectors is especially called to the territory in the North-Western part of the Province of Quebec, north of the height of land where important mineralized belts are known to exist.

PROVINCIAL LABORATORY.

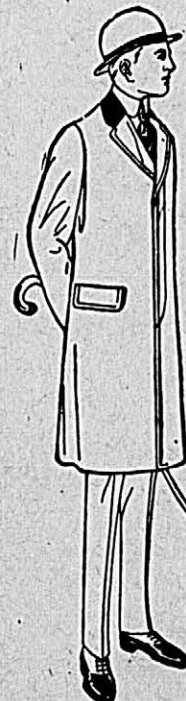

Special arrangements have been made with the POLYTECHNIC SCHOOL of Laval University, 228 ST. DENIS STREET, MONTREAL, for the analysis of minerals at very reduced rates for the benefit of miners and prospectors in the Province of Quebec. The well equipped laboratories of this institution and its trained chemists ensure results of undoubted integrity and reliability.

The Bureau of Mines at Quebec will give all the information desired in connection with the mines and mineral resources of the Province, on application addressed to

HONORE MERCIER,

Minister of Colonization, Mines and Fisheries, Quebec

Semi-ready Service

"Your obedient servant" is the usual subscription to an official letter.

"At your Service" is the sincere meaning behind every Semi-ready garment.

It is pull-together team work to get the wool from the plains of Australia to the towns and cities of Canada—and to tailor it up into a soul-satisfying suit or overcoat.

There are twenty years of Service behind each Semi-ready Suit—twenty years of proven satisfaction.

Why cannot we be your Tailor? with such genuine Semi-ready Tailoring Service to offer you.
